## The Dive Goddess Package **Only \$2199**

Every Dive Goddess knows you must have the best gear to dive, and this package offers just that for you! Recognized as the industry's finest regulator line, your Atomic B2 offers effortless breathing and dependable service. Zeagle's Zena BC is designed by women for women and is comfortable and easy to don. Top off your package with TUSA's air integrated IQ-900 computer and you're ready for your next dive trip!

**Zeagle's Zena BC** has been designed by women as a buoyancy system specifically for women. The twin straps

adjust to fit waist and hips independently, while the elastic front panels provide outstanding fit and comfort. Zeagle's patented PFS sizing system allows for the waist size, chest size, and torso length to be independently fitted. The Zena is designed to be fitted with the upper waistband at the natural waist, placing the weights and buoyancy low, around the body's center of buoyancy.

**Atomic Aquatics B2 Regulator** gives divers an close alternative to

the all-Titanium T2. The signature Atomic breathing performance is

nearly identical. The B2 is ergonomically designed to be the world's most comfortable second stage just like the T2. The key difference is the chrome-plated Brass body of the B2 first stage, which is more economical without sacrificing performance.

**TUSA's IQ-900 Zen** is a full-featured wrist-top computer that boasts a refined, stylish design and can be worn at the office, on the town or more importantly in the ocean. Anytime, anywhere the Zen is your go to timepiece

and dive instrument.

The IQ-900 can be operated as a watch, Air computer, Nitrox (EANx) computer, digital depth gauge/timer or as a free dive depth gauge/timer. The Zen's large alphanumeric and backlit display allows for high legibility in or out of the water, although its size is that of a normal style watch. In addition to offering the latest comprehensive computer features, the Zen adds a Deep Stop function for enhanced safety.

### **Atomic Z2 Octo:**

The "Z" designation is represented by the use of Zirconium as plating material for the precision machined

Brass valve body. Atomic developed a Zirconium over Chrome over Brass plating process to deliver corrosion-resistance 3-4 times that of conventional chrome plating. The Z2x second stage lever, orifice and spring are Titanium.
